SUMMARY

Computer Science undergraduate with hands-on experience machine learning models and full-stack applications. Strong foundation in data structures, algorithms, and object-oriented programming, paired with work in Python, React.js, and Node.js. Focused on writing clean, efficient, well-tested code and translating data into measurable product decisions.

EDUCATION

UTTARANCHAL UNIVERSITY

Bachelor of Technology

Computer Science and Engineering

Cumulative GPA: 9.13/10.0

Dehradun, India

Aug 2024 – Aug 2028

ENTRI ELAVATE

Kochi, India

Advanced Program in Data Science – ML

Feb 2026 – Aug 2026

Certified by : Entri Elevate, Illinois Tech US, NSDC

WORK EXPERIENCE

XYlofy AI

Data Science Intern (Remote)

Bengaluru, India

June 2026 – July 2026

- Built and evaluated machine learning pipelines on production datasets, applying clustering, time-series forecasting, and gradient-boosted models
- Worked with supervised, unsupervised, and time-series models including SARIMA and Prophet
- Collaborated on data preprocessing and model validation workflows, improving consistency and reproducibility of experiment results

Unified Mentor Pvt. Ltd.

Data Science Intern (Remote)

Gurugram, India

June 2025 – July 2026

- Performed exploratory data analysis using Python, Pandas, NumPy, Matplotlib, and Seaborn to identify trends and correlations across multiple datasets
- Cleaned and preprocessed raw data – handling missing values, outliers, and categorical encoding – to improve downstream model input quality
- Built and evaluated baseline regression and classification models, translating results into actionable, data-driven insights

PROJECTS

ETL and Data Quality Pipeline

July 2026 – Sep 2026

- Built an end-to-end ETL and data quality pipeline using Python and Pandas to extract, transform, validate, and load customer, order, and support-ticket data.
- Implemented automated data-quality validation for missing/invalid emails, phone numbers, ages, duplicate records, and inconsistent data, generating separate valid/invalid datasets and quality reports.
- Orchestrated the ETL workflow with Apache Airflow, defining DAGs and task dependencies to automate and monitor scheduled data-processing workflows.
- Containerized the pipeline with Docker and implemented CI testing with GitHub Actions, running automated tests on code pushes and pull requests for reproducible and reliable deployments

End-to-End Sales Forecasting & Demand Intelligence system

June 2026 – July 2026

- Developed an end-to-end Sales Forecasting & Demand Intelligence system using Python, Pandas and statistical/ML techniques to analyse historical retail sales and generate future demand forecasts.
- Implemented SARIMA-based time-series forecasting at Region and Category levels, using a 12-month holdout validation and evaluating predictions with MAE and RMSE metrics.
- Built demand intelligence modules using Isolation Forest and K-Means, detecting anomalous weekly sales patterns and segmenting product sub-categories into High, Moderate and Low Demand groups.
- Deployed an interactive Stream-lit dashboard with dynamic Region/Category filtering, KPI analysis, Plot visualizations, forecast horizons, anomaly reports, and demand-segmentation insights.

FIFA World Cup 2026 Prediction & Analysis

Dec 2025 – Jan 2026

- Developed a machine learning pipeline to predict Home Win, Away Win, and Draw outcomes using historical match data, FIFA rankings, ELO ratings, and team squad valuations.
- Engineered domain-specific features including ELO/rank differences, squad-value ratios, historical head-to-head statistics, goal-difference averages, and recent team momentum from 63 raw features.
- Applied Chi-Square and ANOVA statistical analysis for feature selection and used 5-fold target encoding with smoothing for high-cardinality team features before model training.
- Built a Bagging + XGBoost ensemble and achieved 79.27% test accuracy on 193 matches, with F1-scores of 0.86 for home wins and 0.82 for away wins.

SKILLS

Technical Skill:

- Programming and ML libraries: Python, Tensorflow, Scikit-Learn, HuggingFace, Pandas, Numpy
- Backend and APIs: NodeJS, Express, FastAPI
- Frontend: React, HTML, CSS, JavaScript, Ejs
- Database: SQL, PostgreSQL
- Project Development: Technical Documentation, Canva
- Tools & Platforms: Git, GitHub, Jupyter Notebook, VS Code, Postman, Kaggle, Google collab

Language: Fluent in Malayalam and English; Conversational Proficiency in Hindi, Tamil.

Certifications & Training: *Advanced Program in Data Science – ML (Entri Elevate, Illinois Tech US, NSDC), Fullstack development (Udemy)*
